The epitopes of the invention may be used as a vaccine against allergic diseases. The method of the invention is useful for inducing an immune response against autologous IgE in an animal, which is useful for downregulating autologous IgE in an animal, which is useful in the prevention and treatment of allergic diseases such as anaphylaxis, allergic rhinitis, asthma and atopic dermatitis. The present sequence represents the human IgE heavy chain C2-C3-C4 domains used to create the
                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

                                                                                                                                                presenting cells (APCs) of the animal's immune system. The epitopes of the invention may be used as a vaccine against allergic diseases. The method of the invention is useful for inducing an immune response against autologous IgE in an animal, which is useful for downregulating autologous IgE in the animal. This method is useful in the prevention and treatment of allergic diseases such as anaphylaxis, allergic rhinitis, asthma and atopic dermatitis. The present sequence represents the human IgE heavy chain C2-C3-C4 domains optimised for expression in a state of the present sequence.
                                                                                                                                                                                                                                                            comprises effecting simultaneous presentation of cytotoxic (CTL) epitope and/or B-cell epitope derived from IgE, and T epitope (TH epitope) which is foreign to the animal, by ant
                                                                                               Sequence
                                                                                                                                                                                                                                                                                                      This invention relates to a novel method for inducing an immune response against autologous immunoglobulin E ({\tt IGE}) in an animal. The method

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             QY
                                                             This invention relates to a novel method for inducing an immune response CC against autologous immunoglobulin E (IgE) in an animal. The method CC comprises effecting simultaneous presentation of cytotoxic T lymphocyte (CTL) epitope and/or B-cell epitope derived from IgE, and T helper cell CC epitope (TH epitope) which is foreign to the animal, by antigen presenting cells (APCs) of the animal's immune system. The epitopes CC of the invention may be used as a vaccine against allergic diseases. The method of the invention is useful for inducing an immune response against autologous IgE in an animal, which is useful for downregulating CC autologous IgE in the animal. This method is useful in the prevention CC and treatment of allergic diseases such as anaphylaxis, allergic CC rhinitis, asthma and atopic dermatitis. The present sequence represents the human IgE heavy chain C2-C3-C4 domains optimised for expression in an E. Coli system, this sequence was used to create the epitopes of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo

The amino acid sequence of the Ec(epsilon) CH2'-CH4 fragment covering amino acids 226-547. The DNA sequence was isolated from a human myeloma 266BL cDNA library screened with a probe corresp. to the N-terminus of IgE. The region encoding amino acids 218-547 was cloned into the vector
                                                                                                                                                                                                            Antiallergic vaccine contg. polypeptide fragment of IgE heavy chain - has epitope(s) not present in native IgE, also derived antibodies for treating or preventing allergies, inflammatory immune disease,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  06-MAR-1996
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR83559;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAR83559

The resultant protein produced contains some non-Fc amino acids. These were removed by replacing their coding sequence with a bicistronic linker. The resultant construct encodes the Fc(epsilon) constant heavy region from amino acids 28-547. When it is expressed in E.coli, the protein produced is a non-glycosylated Fc(epsilon) fragment. Altering the pattern of a glycosylation unmasks new antigenic sites thus rendering the Fc fragment immunogenic and able to induce antibodies that recognise native IgE but do not form histamine-releasing complexes. The Fc fragments can be used in anti-allergenic vaccines to modulate the intensity of immune responses mediated by IgE.
                                                                                                                Misc-difference
                                                                                                                                                                                 Misc-difference
                                                                                                                                                                                                                                                   Misc-difference
                                                                                                                                                                                                                                                                                                                     Misc-difference

The sequence is preferably mutated (see AAR75225) to represent a protein encoding a protein where Cys225 is mutated, optionally together with Val224, Ser226 and Arg227. The protein is useful in the study and treatment of allergy.

It was used to construct a number of immunogenic peptides which consisted of regions of IqE from different mammals, which appear to cause a stronger polyclonal anti-self IqE response than peptides consisting of the same regions from one mammal. Immunogenic peptides, particularly those consisting of different heavy chain constant regions, can be used for vaccination in humans, against bacterial and viral infections and allergies, such as asthma, fur, pollen and food allergies and eczema.

The method comprises effecting simultaneous presentation of cytotoxic T lymphocyte (CTL) epitope and/or B-cell epitope derived from IgE, and T helper cell epitope (TH epitope) which is foreign to the animal, by antigen presenting cells (APCs) of the animal's immune system. The epitopes of the invention may be used as a vaccine against allergic diseases. The method of the invention is useful for inducing an immune response against autologous IgE in an animal, which is useful in the prevention and treatment of allergic diseases such as anaphylaxis, allergic rhinitis, asthma and atopic dermatitis. The present sequence represents the human IgE heavy chain C1-C2-C3-C4 domains used to create the

Constant region. The invention is based on the discovery that a constant region. The invention is based on the discovery that a constant region. The invention is based on the discovery that a constant region. The invention of a carrier, can be used to induce in a mammal the production of carrier, can be used to induce in a mammal the production of compositions are provided for inducing self-specific anti-IgE compositions are provided for inducing self-specific anti-IgE coupled to polypeptides contain carriers foreign to the immunised mammal coupled to polypeptides containing fragments of the IgE molecule, coupled to polypeptides containing fragments of the IgE molecule, coupled to polypeptides containing fragments of the IgE molecule, coupled to polypeptides containing fragments of the IgE molecule, coupled to polypeptides have at least 95% identity to amino acids 1-110, 105, 5-105 or 5-95 of the present sequence, while CH4 polypeptides have at least 95% identity to amino acids containing and polypeptide in the mammal's serum. Alternatively, a polynucleotide encoding a fusion comprising the coarrier and IgE-derived polypeptide is compositions and polynucleotides are used to indicate the polynucleotides are 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition for treating immunoglobulin (Ig) E-mediated disorder such as anaphylactic shock, allergic rhinitis and conjunctivitis, comprises a polypeptide that includes CH1 and/or CH4 domains of IgE molecule coupled to a carrier
                                                  an allergen such as fur, dust or freezema or urticaria (all claimed).
                                                                               inhibit or treat IgE-mediated disorders such as anaphylactic shock, allergic rhinitis or conjunctivitis, an allergic reaction an allergen such as fur, dust or food, an asthmatic reaction,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI;

                                                                                                                                                  reducing infection by human rhinovirus (HRV) and hence the initiation or compared of the common cold by HRV. The immunoadhesin binds to HRV and reduces its infectivity, competing with cell surface ICAM-1 for binding sites, interfering with virus entry or uncoating and directing premature release of viral RNA and formation of empty capsids. Expression of the immunoadhesin in plants would be tetrameric, rather than dimeric.

Immunoadhesin having multiple binding sites have a higher effective affinity for the virus, thereby increasing the effectiveness of the immunoadhesin. Association of secretory component and immunoglobulin J chain increases the stability of the immunoadhesin in the mucosal environment. Production is significantly less expensive in plants than in animal cell culture and production in plants is safer for human use, since plants are not known to harbor any animal viruses. The present sequence is that of a human immunoglobulin protein sequence, useful to

and anti-asthmatic properties. (I) induces polyclonal antibodies specific for a target effector site on the epsilon-heavy chain of IgE, and so preventing triggering and activation of mast cells and basophils and downregulation of IgE synthesis. Conjugates, or fusion peptides, containing (I) are used for active immunisation against IgE-mediated allergies, e.g. food allergies, asthma, anaphylaxis, or flea-allergy dermatitis. Nucleic acids that encode these compounds are useful for recombinant production of corresponding peptides or in DNA vaccines. Conjugates of (I) that include a promiscuous T helper cell epitope (functional in genetically diverse subjects), in addition to a B cell target epitope, have increased immunogenicity and may include cyclic constraints (disulfide bridge) to stabilise conformational features and maximize cross-reactivity to the natural target. They induce safe
                                                                                                                                                                                                                                                                                                                                                                 The present invention describes immunoglobulin E (IgE)-CH3 domain antigenic peptides (I). (I) have anti-allergic, anti-anaphylactic

The method comprises effecting simultaneous presentation of cytotoxic T lymphocyte (CTL) epitope and/or B-cell epitope derived from IGE, and T helper cell epitope (TH epitope) which is forelyn to the animal, by antigen presenting cells (APCS) of the animal's immune system. The epitopes of the invention may be used as a vaccine against allergic diseases. The method of the invention is useful for inducing an immune response against autologous IGE in an animal, which is useful for downregulating autologous IGE in an animal, which is useful in the prevention and treatment of allergic diseases such as anaphylaxis, allergic rhinitis, asthma and atopic dermatitis. The present sequence represents the human IGE heavy chain C2-C3-C4 domains fused to the MIGIS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Inducing immune response against autologous immunoglobulin E in animal, by effecting simultaneous presentation of cytotoxic T lymphocyte epitope an/or B-cell epitope derived from the immunos

This invention relates to a novel method for inducing an immune response against autologous immunoglobulin E (IgE) in an animal. The method comprises effecting simultaneous presentation of cytotoxic T lymphocyte (CTL) epitope and/or B-cell epitope derived from IgE, and T helper cell epitope (TH epitope) which is foreign to the animal, by antigen

Incomethod of the invention is useful for inducing an immune response against autologous IgE in an animal, which is useful for downregulating autologous IgE in the animal. This method is useful in the prevention and treatment of allergic diseases such as anaphylaxis, allergic rhinitis, asthma and atopic dermatitis. The present sequence represents the human IgE heavy chain C1-C2-C3-C4 domains fused to the MIGIS

                                                                                                                                                                                                                                                                                                                                                                                  DNA encoding IgE H-chain and frags. is claimed (AAN40062). Transformant contg. the DNA is also new, esp. Escherichia coli IFO-14284, -5 and -6. The transformant may be grown to produce a polypeptide of immunological or biological activity equivalent to that of the human IgE H chain. AAN40062 or frags. is pref. linked at a site downstream from a promoter, e.g. rec A promoter (see AAN40064).
